

Orion mPulse 30 – Jewelry

The Simple Pulse Arc Welder

The Orion mPulse 30 is the long awaited addition to the Orion line of pulse-arc welding technology. The mPulse is the simple, compact, and affordable welding system in an easy-to-use package that everyone has been waiting for. Like all Orion welders, the Orion mPulse 30 features a touch screen interface that simplifies the welding process – allowing users to do more and to work more efficiently.

With a 30ws power potential, this small and friendly welder can be used by almost anyone and has the power to tackle all sorts of jobs. It's perfect for those needing a welder for making quick, small welds on a light duty cycle.

The mPulse power settings range from 5.0ws to 30ws, in 2.5ws increments—that's 11 different power settings to choose from. The weld spot size on the smallest setting is nearly 1mm, depending upon your material. The largest setting of 30ws will yield a weld spot approximately 1.5mm in diameter, again, depending upon the material you're welding.

Applications

- Ring Resizing
- Filling Porosity
- Seam Welding
- Clasp Repair
- Earring Posts
- Eyeglass Repair
- Metal Sculpting

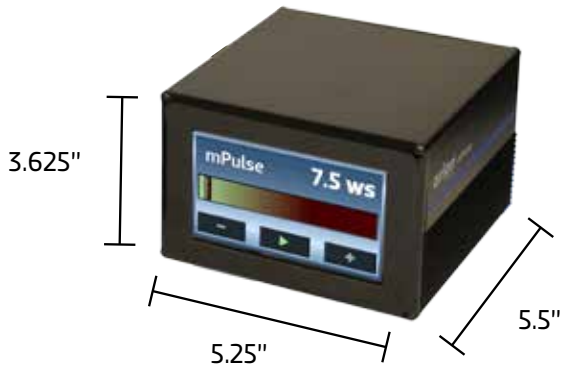

Features

- Simple Touch Screen Interface
- Easy-To-Use System
- Space Saving
- Auto Darkening Lens with a 3 shade and adjustable shade options from shade 9 to shade 13
